OCTI Instructions

Pieces stacked together in one square may each move on a single turn.

On this turn, the top pod moves to A; the middle pod moves to B; and the bottom pod remains in place.

Stacked pods ignore each other when moving or jumping.

Any pieces that are jumped may be removed at the end of the turn.

Bottom pod jumps to A to B, and top pod jumps to B to C.

Edgeless board examples

Contents

OCTI game board — 9x9 grid of squares, 6 of which are marked "OCTI"
16 pods (8 light/8 dark) — octagon shaped pieces
52 prongs — (50 dark/2 light) — wooden peg pieces

Objective

The winner is the first player to occupy all three enemy OCTI squares at the same time. For a shorter game, play to occupy a single enemy OCTI square.

Setup: Two-player game

- Place game board between players, so that OCTI squares face each player.
- Each player receives 7 pods of a color and 25 dark colored prongs.
- At the start, players place one empty pod on each of the friendly OCTI squares.
- Each player holds four extra pods in reserve for future use.
- Arrows on pods should be visible and *always* pointed toward the opponent.

Rules of play

OCTI is a game of options. Players, in turn, must do one and only one of the following:

I. Insert a prong into a friendly pod.
II. Reposition a prong in a friendly pod.
III. Move a friendly pod (or pods if more than one occupy the same square).
IV. Jump other pods, capturing them if desired.
V. Bring a reserve or captured pod onto the board.

When exercising one of these options, keep the following guidelines in mind:

- Pods may only move or jump in the direction of their prongs.
- A prong may only be added to your own pod.
- To conserve your supply of prongs, a prong may be repositioned in the same pod.
- Some or all of the pods that occupy a square may move or jump in a single turn.
- Pods stacked together in a single square may move or jump in separate directions.
- Pods move only to adjacent squares (unless jumping).
- Pods can never move to a square occupied by an enemy pod, but any number of friendly pods may stack together.
- Pods may jump other pods, whether friendly or enemy.
- A jumping pod must land in an empty square immediately behind the jumped pod.
- Multiple jumps are allowed, but a pod cannot jump the same square twice in a turn.
- Any pod that is jumped may be captured at the conclusion of the turn.
- Captured pods are removed from the board and kept separate from reserve pods.
- Pods are not required to jump, and capturing is optional.
- If jumped, all pods in a stack may be captured.
- Pods stacked together may not jump each other.
- A stack may jump to the same destination.
- Players seize all prongs from pods that they capture.
- A reserve pod may be brought onto any friendly OCTI square.
- A reserve pod may be brought onto any enemy OCTI square you occupy.
- If you occupy an enemy OCTI square, you may liberate one of your captured pods; this liberated pod is stacked on any OCTI square that you occupy.
- OCTI squares do not affect movement or capture. They are not "safe" squares.

Setup: Four-player game

- Players form two teams, and partners sit diagonally across from one another.
- Each team receives 8 pods of one color (4 for each partner) and 24 prongs (12 for each partner).
- Each player places one empty pod on a corner OCTI square, which is that player's home base. Each player's three extra pods are held in reserve.
- No communication between partners is allowed after the start of play.
- To distinguish between partner's pieces, make arrows visible for one player and hidden for the other player.

Rules of play

Above game rules apply except:

- Victory is achieved by occupying the opponents' two home bases.
- If an enemy pod occupies a player's home base at the end of a turn, all of that player's pieces on the board are captured, and that player is out of the game.
- Partners cannot share pods or prongs, but allied pieces may stack together.
- A player who occupies the home base of an eliminated teammate may use a turn to liberate an allied pod on that square. The liberated player may then play normally.
- One may liberate captured pods on any occupied enemy or neutral OCTI square.

Player Options

Edgeless Board. Increase the range of strategic possibilities by allowing pods to exit the edge of the board and return at the opposite end.

Superprongs. Players receive 25 prongs, one of which is a light color. A superprong entitles a player to an extra move. Before the start of the regular turn, you may move or jump your pod in the direction of its superprong. You may now start the regular part of your turn, moving or building.

- Once placed in a pod, superprongs may not be repositioned.
- Superprongs may be captured from friendly or enemy pods.
- A player with two superprongs (one friendly, one captured) is entitled to two extra moves.

The superprong version is best when played on an edgeless board.
